Educational Digital Future

Corporate Brochure

Educational Digitalization Wave

A good school/college is much more than an educatively oriented opportunity for students to explore their internal strengths and to become a frankly encouraging environment for them. Opportunity-based talents around the world. We require a new education system for the creation, not just of a substandard service provider nation, but of entrepreneurs, innovators, scientists, and scholars who can corroborate the basics of the knowledge-based economy. The key is to tailor the education according to the needs of all individual students; therefore virtual classrooms must be included in the education system. Furthermore, the digitization of the system is inevitable from the standpoint of an educational institution. There are many challenges for education institutions, such as trying to win a competitive edge with increasing numbers of institutions entering the sector. Finance management through reduction of operating costs and improvement of educational quality.

Our web & mobility solutions can help Syolo Outsourcing higher education institutions in many ways. Mobile phones, tablets, laptops, and computers with super fast broadband connections are the most effective tools for this propagation.

This allows you not only to inform the masses about your educational facilities, but also to attract your target students and stakeholders.

We help you improve your people's efficiency and monitor their performance to change the Structure of the organization.

Our Services

We at Syolo Outsourcing understand the restrictions on the participation of faculty, managers, university students, alumni, investors and other stakeholders in education institutions and integrate them into them. We comprise a competent and know-how-based team that uses their know-how to increase your management system's skills, to improve your overall student experience, and to provide all interested parties with secure information and services.

Here's a list of procedures in each educational establishment and how we support you in your best daily activities:

1. eCampus Requires

1.1 Attendance Management System

The proposed system is a powerful solution to preserve the presence of the organization's employees, including academic, administrative and other workers. You can use the attendance module to manage the attendance of your personnel systematically. The working load is calculated automatically for academic staff (faculties) and the working hours are calculated for the other staff members.

1.2. Certificate Managing System

During the course of their studies, each Institute must maintain various records for every student. For various reasons such as education loans, abroad studies, advanced education, or governmental claims, students request various certificates such as Bona fide, Transcript, and Syllabus Certificate, etc. System Module for Certificate Management enables management to keep these records easily.

1.3 Manage ID CARD

An ID card is the key ID provided to your students by each Institute. The document is an official one that can be used in any emergency. Therefore, it is equally important to keep a track of ID card documents (Issued and Expired) as to keep track of financial records. In the case of lost/displaced ID cards, some institutions request the student to submit an affidavit, as the misuse of the Lost ID Card might lead to legal complications. A built-in feature to design, generate and issue the ID card from the system itself can help prevent abuse of these ID card systems.

1.4 Managing Time Table

The main headache for every institution is the Time-Table generation. Students are usually divided into academic management batches or divisions. In Syolo Outsourcing Time-Table Management Module, you can create a time-table separately for each division or batch in two ways:

1.4.1 Hourly system (Wise time table of reading)

1.4.2 Day-Wise Time Table, Daily System.

1.5 Fees Management System

The management of fees is a very tedious job because it takes much care while the fees are paid because it is very important to keep the financial records in every company. At the end of each financial year, proper accounting is also required. Fees administration Module is managed completely on the basis of an authenticated user/admin fee scheme (Fee Taking Policy). Therefore, for every particular student the clerical staff need not remember each head and amount. The institution can receive the fees via the Payment Gateway online. The administrative authorities can get a broader picture of the company and judge incomes by the reports available.

1.6 Course Management system

The main objective of any academic institution is to provide the best quality of education. This means that your academics are managed the easiest way with the course management system. To prepare a daily educational plan for the faculties, the curriculum can be divided into small parts.

1.7 Exam Management system

In this scenario, the institution must summarise each student's participation (with criteria of eligibility) and internal assessment, present an exam form to the relevant university, list those students who take part in the test, etc.

1.8 Result Management System

The Result Processing Module is designed to give the manager the power to manage the entire business as a single interface. The various processes which have been handled by the results processing and management systems are: incorporating result orders, re-assessment management, gracing with a panel; with-held cases management, ranker analysis(Class/Subject), unfair cases management, mark-sheet/bulletin printing, degree certificate management. Degree certificate management.

1.9 Leave Management

Current management has a lot of paper costing problems, complete manual keeping all employee leave records and also update, which can cause problems with computing. This system is fully managed online from the application leaves until it is approved/rejected. It is updated regularly and therefore it is easy to track employees' leave of record.

1.10 Hostel Management

Syolo externalises the system for the management of student lodgings, management of rooms, includes vacant rooms for inspection and assignment, All student records, the structure of the hostel fee, the administration of hostel fees and various reports, the structure of the hostel, which has different statistical reports can be generated to judge in which level max students exist.
